

The **Armtrac 400** is the largest and most powerful of the Armtrac range. With its hydraulically driven 3 meter Tiller rotor, it is capable of clearing 2,400 square meters per hour (depending on terrain & operator experience). With an effective tilling depth of 55cm the Armtrac 400 is designed to destroy & withstand 10kg Anti-Tank mines.

The 400 is fully remote controlled up to 800 meters allowing the Operator to remain at a safe distance while still maintaining 100% control of all the machine's functions, or alternatively with its fully armoured, sound proofed & air-conditioned cabin (which can withstand NATO Ball at point blank range), an Operator can maintain a detailed "bird's eye" view of demining operations in complete *comfort & safety*.

As an optional extra, we can add a unique "scissor-lift" cab mounting so that shocks are absorbed & the ride height can be adjusted for the best possible view.

The **Armtrac 400** has a Telescopic Boom to which different demining toolkits can be attached. This boom can be extended to clear mines and UXO in difficult locations such as on river banks and on inclines, while remaining completely stationary. This is a unique feature to the Armtrac tracked machines.

A variety of toolkits are available for demining and clearing UXO. As well as a tiller and flail, the Armtrac Mine Comb or screener/segregator can extract buried mines and UXO down to 50 cms. When the Armtrac Sifter is fitted to the rear of the machine, this extracts items & potentially missed ordnance down to 50 cms which provides a comprehensive quality assurance tool when fitted together with a front mounted tiller or flail.

While remaining a proven force in the clearance of mines, IEDs and UXO, the **Armtrac 400** will accommodate any standard construction tool such as buckets, dozer blades, fork lift tines or power grab using an industry standard quick hitch coupling. The backhoe excavator can be fitted to the rear of the machines when a demining toolkit is fitted to the front. Alternatively, the backhoe can be fitted onto the boom arm which provides a very versatile and far reaching tool with a standard scrape bucket or a grapple attached for extracting UXO which are difficult to access.

The boom arm will lift up to 4 tons which makes the **Armtrac 400** a very powerful workhorse for a wide range of levelling, loading, lifting and construction roles. This gives it a “second life” after its clearance role.

Armtrac has sold the 400 into numerous countries. Its telescopic boom and more reliable hydraulically operated tools make this, and our other Armtrac products, strong market competitors. The **Armtrac 400** is a powerful, value for money demining machine that gives the customer complete flexibility to use it in a variety of additional roles in and out of high threat areas.
